

Brachiate rings - Brachiate rings requires very little space, but can create a lot of activities in both small and large rooms, for example in hallways. A small solution that gives maximum utilization.

BRACHIATE RINGS

One of the highly prioritized topics in the Danish school reform, is that physical activity and movement must be a part of every child's schoolday. This creates high demands regarding a new way of designing schools - often with base in existing facilities, like here at the Engstrand school. At Engstrand school we have created a multi area, where a transparent climbing wall and roman rings makes a long and boring hallway an exciting area for physical activities. A small solution that gives maximum utilization.

Which kind of sports station with brachiate rings, can we offer?

- Roman rings on a rack to installation on a ceiling.
- Climbing wall with Polycarbonat climbing panels.

What are the benefits to our sports station with brachiate rings?

- Easy and simple solution, that doesn't require much space in existing hallways.
- Invites children to physical activity without the need of adult participation.
- Provides the opportunity of physical activity in between classes, if the solution is placed close to the class rooms.
- Doesn't require a large economical investment or a renovation of the building.
- Sustainable and strong solution which can last a long time.
- Roman rings strengthens motor skills - both for children and adults.
