

Artificial turf on rooftops - We have installed artificial turf on roofs of large and small buildings in schools and sports halls around Denmark.

ARTIFICIAL TURF ON ROOFTOPS

In recent years, in collaboration with creative designers and foresighted builders, we have installed artificial turf on roofs of large and small buildings in schools and sports halls around Denmark. We would like to advise throughout the process - from the idea takes shape to the completion of the project, to ensure an optimal solution regarding the maintenance and use of the artificial turf pitch.

Through our own development, we have created lightweight and drainage structures for use on flat roofs, ensuring optimal utilization of the existing area. We also offer delivery of complete sports facilities on roof surfaces.

Sports surfaces on roof surfaces require special skills. Many factors must be taken into account:

- How much weight can the roof top carry?
- How is the drainage system designed to prevent water damage in the building?
- How to ensure a smooth and stable coating?
- How does the solution comply with the authorities' fire requirements?
- How are fences or the roof of net designed?
- And last but not least - how are users' requirements respected?

Therefore, always obtain competent advice from Unisport Scandinavia when constructing a multipurpose pitch on the roof of a building.

HERE WE HAVE DELIVERED - ARTIFICIAL TURF ON ROOFTOPS
